

W04-P1: Hooks Tutorial T11_xx

The screenshot displays a development environment with Visual Studio Code on the left and a web browser on the right. In Visual Studio Code, the file explorer on the left shows a project structure with a folder named 'T11_39-error-example.js'. The main editor shows the code for 'T11_39-error-example.js', which includes a function `T11_39_ErrorExample` that sets a `title` state to 'Hello World' and renders it as `<h2>{title}</h2>`. A button labeled 'Change Title' is also present. The terminal at the bottom shows the command `npm run build` and the message 'compiled successfully!'. The web browser on the right shows the rendered application at `localhost:3000`. The page title is 'Tutorial 11 - 210410139' and the main content is 'Random Title'. The console on the right shows a warning about `ReactDOM.render` being deprecated in React 18, and a log message 'tile Hello World'.

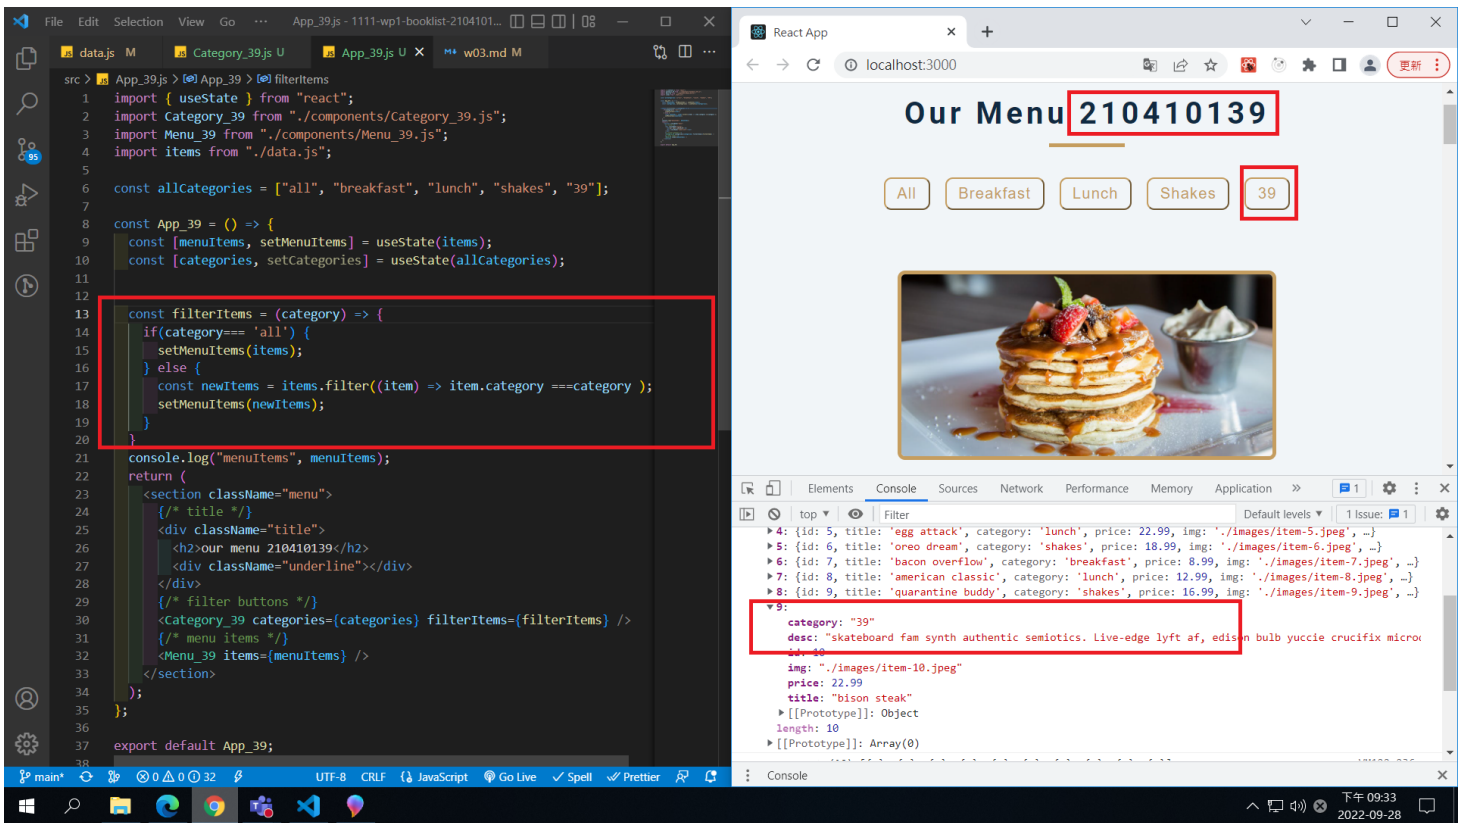

W04-P2: Hooks Tutorial T12_xx, fix problem in T11_xx

W04-P3: Hooks Tutorial T13_xx, useState using array of objects with remove item capability

W04-P4: W03 menu demo, adding filter function for categories

W04-logs: show all four logs done today
